Q: Flutter: android/ios Icon design and implementation In my Flutter project, I want to use the Material Design Icon packages to provide custom icon and therefore I have 2 questions: Does it make sense to use the Material Design Icon packages to provide custom designs. For example, in Material Design Docs they indicate Material Design Icon package: Material Design Icon packages provide different icons in PNG, EPS, SVG, and ICO formats. Use these icon packs to design apps that have... So the question is, does it make sense to use the Material Design Icon packages to provide custom designs? If yes, how can I create the png icon file from Xcode? If no, is there any other purpose to use Material Design Icon packages? Thanks! A: It is designed to be used with Material Design. For development purposes, I would suggest using the Material Design Icon packages to get started. They generally provide good-looking, quality icons. As for editing your own icon in xcode, you would be better off using the Flutter Icon package, as that supports SVGs. There is also a build artifact that you can include in your app. Icon. The icon packages that you link to are meant for app design. But you can also use them for your own icon. The icon packages are based on the official Material design icons as seen here [The second visit to Europe](#)
